

## What concerns you most about further development within the Parish?

### Other

Scopwick	Kirkby Green
*sewers and drains - Any infrastructure would need to be updated to cope with further development	A speed or weight restriction must be applied to the main st. from Scopwick to Kirkby Green. Heavy lorries are shedding their loads at the bend coming into Kirkby Green because they are breaking the speed limit for the village
1.Loss of identity. Impact on significant views. Loss of countryside. development not fitting with the current character of the area. 2. Development should respect the traditional pattern which formed the village layout. Cul-de-sac developments should be banned	All of the above are my concerns
All the options stated	All of the above but will not let me select more than one
Becoming too big	Any development needs a capable sewage system
Before any development in the village; the whole sewer, drains and pumping station need updating !	Lack of affordable housing for local people
Building on beach flood risk areas downstream of B1188 along B1191 The sewage and drainage at the eastern end of Scopwick are already near critical partly due to the development at the western area of the village over the last 30 years	Noise
Development of small villages is a positive, if done correctly.	Noise. Lack of support from neighbours.
Development should respect the traditional pattern which formed the village layout. Cul-de-sac developments should be banned	Safety

Lack of amenities to support further housing	Unfortunately this question will not let us tick more than one box and all of the above are of concern. The sewers and drains are already problematic in our area
Lack of public transport at affordable prices	Weight restrictions on through roads unless for access. Speed Limit reduction on B1188
New development inevitably would increase traffic but if a village needs a younger heart this has to be accepted as has been our county for many years.	<p><b>Online responders unable to tick more than one box- some rsponders have commented that all options are a concern</b></p>
Sewers + drains extremely important.	
That restrictions previously stated are not observed	
The current infrastructure of the Parish is already poor with respect to care facilities and local shops. Increased development with no improved infrastructure seems like the wrong way to go. Cart before the horse.	
The sewers and drains would require extensive upgrade before any proposed additional development	
Would like to have ticked more options. I'm concerned about most of these
