

Do you support the development of the following energy sources on a commercial basis in our Parish?

Other

Scopwick	Kirkby Green
Depending on where these are/ impact on health and environment/ wildlife. Need more knowledge	The proposed site for solar power were in areas which didn't impose on the landscape
Biomass smell, need extra traffic and could catch fire	Smaller schemes would be ok
Depends where and how they will impact on the village - support use of sustainable energy services.	Depends on impact on area and whether an agricultural/ farm land. Anything which works to produce energy + less negative impact on earth/ environment is good
Don't know enough about biomass to comment	
I agree with solar and biomass but large scale need to be well outside village boundaries and not be imposing	
I would support most clean energy sources but would require more information about the impact on the village	
I would support most clean energy sources but would require more information about the impact on the village	
Is this Question aimed at Blankney estate	
Its NOT appropriate to place solar panels/ turbines on land!!	
Must not spoil village character, should not have noise or spoil landscape	
Small individual wind turbines for private use would support 'green' energy	
There are wide open spaces all over Lincolnshire so shouldn't be near to where people live	
Thermal heat exchange	
They all have to rely on Grant aid to be viable	
With a benefit to the community	
A waste of time and money	

Anything that smells, is noisy or is cruel to animals
